This unique A-Z guide to central heating wiring systems provides a comprehensive reference manual for hundreds of items of heating and control equipment, making it an indispensable handbook for electricians and installers across the country. The book provides comprehensive coverage of wiring and technical specifications, and now includes increased coverage of combination boilers, recently developed control features and SEDBUK (Seasonal Efficiency of Domestic Boilers in the UK) boilers ratings, where known. In addition to providing concise details of nearly 500 different boilers fuelled by electric, gas, oil and solid fuel, and over 400 programmers and time switches, this invaluable resource also features numerous easy-to-understand wiring diagrams with notes on all definitive systems. Brief component descriptions are provided, along with updated contact and website details for most major manufacturers. Ray Ward has spent over 20 years as a specialist in the field of wiring domestic central heating systems and the knowledge he has gained from hands-on experience and staff training is now brought together in this comprehensive handbook.

When new parents decide they want to create a special room for their new family member, the popular Ideas for Great series is there to help them with this new edition. Ideas for Great Baby Rooms contains everything parents need to set up a cozy, playful, practical, yet safe, space for their baby. Dozens of beautiful photographs adorn the pages of this volume, providing inspiration for a number of different nursery themes. Along with these photos, the book includes a Shopper's Guide which provides valuable purchasing information on everything parents will need to stock the room, from cribs and changing tables to wallpaper and lighting.

As the world grows increasingly interconnected, data communications

has become a critical aspect of business operations. Wireless and mobile technology allows us to seamlessly transition from work to play and back again, and the Internet of things has brought our appliances, vehicles, and homes into the network; as life increasingly takes place online, businesses recognize the opportunity for a competitive advantage. Today's networking professionals have become central to nearly every aspect of business, and this book provides the essential foundation needed to build and manage the scalable, mobile, secure networks these businesses require. Although the technologies evolve rapidly, the underlying concepts are more constant. This book combines the foundational concepts with practical exercises to provide a well-grounded approach to networking in business today. Key management and technical issues are highlighted and discussed in the context of real-world applications, and hands-on exercises reinforce critical concepts while providing insight into day-to-day operations. Detailed technical descriptions reveal the tradeoffs not presented in product summaries, building the analytical capacity needed to understand, evaluate, and compare current and future technologies.

Originally published in Japanese in 1984 (Sangyo Tosho KK, Tokyo) this translation of advanced Japanese research provides a concise description of the design, manufacture, and applications of various actuators used in modern control systems. Miniature linear motors, hydraulic and pneumatic actuators, servo motors, AC and DC control motors, and stepping motors are discussed by leading Japanese researchers, while the volume concludes with a forward-looking examination of the actuators of the future--bio-engines and those utilizing functional materials. For postgraduate and research engineers and machinery system design and manufacturing engineers in industry. Book club price, \$172. Annotation copyrighted by Book News, Inc., Portland, OR

.Society does not generally expect its farmers to be visionaries.. Perhaps not, but longtime Maine farmer and homesteader Will Bonsall does possess a unique clarity of vision that extends all the way from the finer points of soil fertility and seed saving to exploring how we can transform civilization and make our world a better, more resilient place. In Will Bonsall's Essential Guide to Radical, Self-Reliant Gardening, Bonsall maintains that to achieve real wealth we first need to understand the economy of the land, to realize that things that might make sense economically don't always make sense ecologically, and vice versa. The marketplace distorts our values, and our modern dependence on petroleum in particular presents a serious barrier to creating a truly sustainable agriculture. For him the solution is, first and foremost, greater self-reliance,

especially in the areas of food and energy. By avoiding any off-farm inputs (fertilizers, minerals, and animal manures), Bonsall has learned how to practice a purely veganic, or plant-based, agriculture—not from a strictly moralistic or philosophical perspective, but because it makes good business sense: spend less instead of making more. What this means in practical terms is that Bonsall draws upon the fertility of on-farm plant materials: compost, green manures, perennial grasses, and forest products like leaves and ramial wood chips. And he grows and harvests a diversity of crops from both cultivated and perennial plants: vegetables, grains, pulses, oilseeds, fruits and nuts—even uncommon but useful permaculture plants like groundnut (Apios). In a friendly, almost conversational way, Bonsall imparts a wealth of knowledge drawn from his more than forty years of farming experience. .My goal,. he writes, .is not to feed the world, but to feed myself and let others feed themselves. If we all did that, it might be a good beginning..

In this fascinating collection of postings from his popular “Musings of an Energy Nerd” blog, Green Building Advisor's Martin Holladay cuts through the hype and myths about energy efficiency, sustainability, and green building to present the very best ways to make your home more energy efficient. Martin Holladay has been making weekly postings to his “Musings of an Energy Nerd” blog on Green Building Advisor since January 2009. Along the way, he has gathered a devoted following of “energy nerds” who await his weekly musings with rapt anticipation. For the first time, the 50 most popular postings have been assembled in book form to give homeowners a great opportunity to live a more energy-efficient life in their homes. The book begins with an overview of energy priorities, and a discussion of what we mean by terms like green and sustainable. Martin presents several options for energy upgrades for an existing house (from replacing windows to adding superinsulation) before looking at ways to improve the energy efficiency of a new house. Separate chapters follow on HVAC, domestic hot water, appliances, and renewable energy, before the book wraps up with an eye-opening chapter on useless products, scams, and myths (including Martin's list of “Stupid Energy-Saving Tips”).

This book provides a comprehensive overview of essential topics related to conventional and advanced drying and energy technologies, especially motivated by increased industry and academic interest. The main topics discussed are: theory and applications of drying, emerging topics in drying technology, innovations and trends in drying, thermo-hydro-chemical-mechanical behaviors of porous materials in drying, and drying equipment and energy. Since the topics covered are inter-and multi-disciplinary, the book offers an excellent source of information for engineers, energy specialists, scientists, researchers, graduate students, and leaders of industrial
