India's Draft Space Communications Policy puts liability for damage to outer space objects on private sector players. IANS. Oct 22, 2020, 13:57 IST.

The utilization of outer space is fraught with dangers. In an effort to guarantee, as much as possible, the rights of victims of injury or damage caused by outer space objects, the United Nations, through its committee on the Peaceful Uses of Outer Space, adopted the 1972 Convention on International Liability for Damage Caused by Space Objects.

In State Accountability for Space Debris Peter Stubbe examines the legal consequences of space debris pollution ? which he argues is a global environmental concern ? under the two distinct accountability regimes of responsibility and liability.

This work examines the whole of the regime of international law and space law including the role of the United Nations, the legal status of outer space, astronauts and out of space objects, the military use of outer space, the commercial uses of outer space and in particular the emerging law relating to satellites and telecommunications.

Since the beginning of space flight, the collision hazard in Earth orbit has increased as the number of artificial objects orbiting the Earth has grown. Spacecraft performing communications, navigation, scientific, and other missions now share Earth orbit with spent rocket bodies, nonfunctional spacecraft, fragments from spacecraft breakups, and other debris created as a byproduct of space operations. Orbital Debris examines the methods we can use to characterize orbital debris, estimates the magnitude of the debris population, and assesses the hazard that this population poses to spacecraft. Potential methods to protect spacecraft are explored. The report also takes a close look at the projected future growth in the debris population and evaluates approaches to reducing that growth. Orbital Debris offers clear recommendations for targeted research on the debris population, for methods to improve the protection of spacecraft, on methods to reduce the creation of debris in the future, and much more.

The 'Cologne Commentary on Space Law' is a three-volume annotation on the written norms of space law as enunciated through the Treaties of the United Nations and its General Assembly Resolutions. Volume I focuses on the 1967 Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies, popularly known as the 'Outer Space Treaty'. A broad international authorship of twenty experts addresses the historical overview and provides a provision-by-provision interpretation of the Outer Space Treaty. This Volume also includes insights into the subsequent State practice, present-day applicability and future perspectives of the Treaty. The other four UN Treaties, the 1968 Rescue Agreement, the 1972 Liability Convention, the 1975 Registration Convention and the 1979 Moon Agreement, are addressed in Volume II, which was published in 2013. Volume III (published in 2015) delves into the eight most relevant United Nations General Assembly Resolutions/Principles on space activities. On the occasion of the 50th anniversary of the Outer Space Treaty, Volume I of the 'Cologne Commentary on Space Law' has been translated into Russian.

This book reviews the practice of shared responsibility in multiple issue areas of international law, to assess its application and development.

The opening of space to exploration and use has had profound effects on society. Remote sensing by satellite has improved meteorology, land use and the monitoring of the environment. Satellite television immediately informs us visually of events in formerly remote locations, as well as providing many entertainment channels. World telecommunication facilities have been revolutionised. Global positioning has improved transport. This book examines the varied elements of public law that lie behind and regulate the use of space. It also makes suggestions for the development and improvement of the law, particularly as private enterprise plays an increasing role in space.
