Tau Zero is a hard science fiction novel by American writer Poul Anderson. The novel was based upon the short story " To Outlive Eternity " appearing in *Galaxy Science Fiction* in 1967. It was first published in book form in 1970. The book is a quintessential example of " hard sci-fi ", as its plot is dominated by futuristic technology.

**Tau Zero** — Wikipedia
Tau zero
Poul Anderson is a writer's writer, David Brin, Vernor Vinge and others swear by him and Vinge even dedicated his epic A Deepness in the Sky to him. His influence on their work is fairly obvious, Anderson knew his science and was able to employ that knowledge to max effect in his fiction.

The blurb on the back of Poul Anderson's 'Tau Zero' lauds it simply as, 'the ultimate hard science fiction novel'. This does not necessarily denote that the book is going to be hard to read, or that the science side will be too overbearing to enjoy the fiction.

If you also hear echoes of Poul Anderson ’ s Tau Zero here, you ’ re exactly on target. Shklovskii and Sagan assume proton-proton fusion as the reaction, as Bussard originally did, but Thomas Heppenheimer was able to show in 1978 that it would take more power to compress the protons gathered from the interstellar medium than the reaction would produce. Ramscoops are tricky, and this is just ...

According to James Blish
Tau Zero is the ultimate hard science fiction novel
For readers with a background in physics and math there's certainly generous helping of science for example
Precisely because there is an absolute limiting speed at which light travels in vacuo; likewise neutrinos there is an interdependence of space ...

The epic voyage of the spacecraft Leonora Christine will take her and her fifty-strong crew to a planet some thirty light-years distant. But, because the ship will accelerate to close to the speed of light, for those on board subjective time will slow and the journey will be of only a few years' duration. Then a buffeting by an interstellar dustcloud changes everything. The ship's deceleration system is damaged irreperably and soon she is gaining velocity. When she attains light-speed, tau zero itself, the disparity between ship-time and external time becomes almost impossibly great. Eons and galaxies hurtle by, and the crew of the Leonora Christine speeds into the unknown.

The epic voyage of the spacecraft Leonora Christine will take her and her fifty-strong crew to a planet some thrity light-years distant. But, because the ship will accelerate to close to the sppeed of light, for those on board subjective time will slow and the journey will be of only a few years ¿ duration. Then a buffeting by an interstellar dustcloud changes everything. The ship ¿ s deceleration system is damaged irreperably and soon she is gaining velocity. When she attains light-speed, tau zero itself, the disparity between ship-time and external time becomes almost impossibly great. Eons and galaxies hurtle by, and the crew of the Leonora Christine speeds into the unknown.

This Hugo Award finalist, " justifiably regarded as a classic " (SFRreviews.net), is the tale of an epic space voyage where time dilation goes horribly wrong. Aboard the spacecraft Leonora Christine, fifty crewmembers, half men and half women, have embarked on a journey of discovery like no other to a planet thirty light-years away. Since their ship is not capable of traveling faster than light, the crew will be subject to the effects of time dilation and relativity. They will age five years on board the ship before reaching their destination, but thirty-three years will pass on Earth. Experienced scientists and researchers, they have come to terms with the time conditions of their space travel. Until . . . the Leonora Christine passes through an uncharted nebula, which damages the engine, making it impossible to decelerate the ship on the second half of their trip. To survive, the crewmembers have no choice but to bypass their destination and continue to accelerate toward the speed of light. But how will they keep hope alive and maintain order as they hurtle deeper into space with time passing more and more rapidly, and their ultimate fate unknown? With its combination of mind-blowing hard science and compelling human drama, Tau Zero is " the ultimate hard science novel " (Mike Resnick).

A New York Times Notable Book and Hugo and Nebula Award Finalist: This epic chronicle of ten immortals over the course of history " succeeds admirably " (The New York Times). The immortals are ten individuals born in antiquity from various cultures. Immune to disease, able to heal themselves from injuries, they will never die of old age—although they can fall victim to catastrophic wounds. They have walked among mortals for millennia, traveling across the world, trying to understand their special gifts while searching for one another in the hope of finding some meaning in a life that may go on forever. Following their individual stories over the course of human history and beyond into a richly imagined future, " one of science fiction ’ s most revered writers " (USA Today) weaves a broad tapestry that is " ambitious in scope, meticulous in detail, polished in style " (Library Journal).

Four explorers from different backgrounds are marooned in space—and must unite to escape their floating prison—in this novel by a Nebula Award winner. In the twenty-third century, when humankind has spread itself throughout the cosmos, with many intergalactic colonies teetering on the brink of open revolt against the hated ruling Protectorate, a team of four is transported by a miraculous technology onto the deep-space vessel Southern Cross. Hailing from vastly different backgrounds, philosophies, and worlds, Ryerson, Nakamura, Sverdlöv, and Maclaren have been entrusted to explore a long-dead star located light-years beyond where humanity has previously traveled. But venturing too close to the target proves disastrous when the black sun ’ s magnetic field permanently obliterates their only means of returning home. Suddenly, four strangers, two hailing from a privileged Earth and two from oppressed galactic colonies, must put aside their differences and work together to somehow find a way out of an impossible situation before time runs out, or die together at the farthest edge of a cold and merciless universe. A remarkably thoughtful and profoundly moving novel of survival in the darkest reaches of outer space, The Enemy Stars is a work of great power and insight by multiple Hugo and Nebula Award winner Poul Anderson, one of the legendary greats of golden-age science fiction.

The only survivors of an annihilated human race must find one another somewhere in the cosmos and unite to destroy the alien aggressors who obliterated the Earth in this classic science fiction adventure
After a three-year mission, the American starship Benjamin Franklin and its all-male crew have returned to Earth, only to discover the planet is dead, a blackened shell devoid of life. It is clear that one of a trio of alien species engineered the holocaust, but which?
When the captain of the Franklin falters, engineer Carl Donnan is forced to take command of the ship. The future of what remains of the human race is in his hands. Donnan ’ s first priority is to escape with his crewmates; the second is to find out if there are other human survivors somewhere among the stars—unbeknownst to Donnan and the three hundred men now under his charge, the female crew of the Europa also survived the genocide—and the third is to seek vengeance, for the alien annihilators will not rest until their task is completed. If the last men and women in the galaxy do not identify and destroy their enemy, there will be no place in the universe to hide. The winner of three Nebulas, seven Hugos, and numerous other awards over the course of his illustrious career, science fiction Grand Master Poul Anderson has written a magnificent adventure of courage and survival in the wake of the unthinkable, demonstrating once again why he is considered one of the brightest literary lights to shine during the Golden Age of Asimov, Heinlein, and Bradbury.

February 13, 2082, First Contact. Sixty-two thousand objects of unknown origin plunge into Earth's atmosphere - a perfect grid of falling stars screaming across the radio spectrum as they burn. Not even ashes reach the ground. Three hundred and sixty degrees of global surveillance: something just took a snapshot. And then... nothing. But from deep space, whispers. Something out there talks - but not to us. Two ships, Theseus and the Crown of Thorns, are launched to discover the origin of Earth's visitation, one bound for the outer dark of the Kuiper Belt, the other for the heart of the Solar System. Their crews can barely be called human, what they will face certainly can't. 'A tour de force, redefining the First Contact story for good' Charles Stross. 'If you only read one science fiction novel this year, make it this one! ... it puts the whole of the rest of the genre in the shade ... It deserves to walk away with the Clarke, the Hugo, the Nebula, the BSFA, and pretty much any other genre award for which it's eligible. It's off the scale ... F\*\*king awesome!' Richard Morgan. 'State-of-the-art science fiction: smart, dark and it grabs you by the throat from page one' Neal Ascher.

'Imagine that tomorrow neurotic response is so accelerated on this earth that an I.Q. of 500 is commonplace, a moron has the thinking capacity of yesterday's intellectual. Poul Anderson's detailedly plausible exploration of his theme makes for an unusually satisfying and stimulating book.'

In a world where Security is all-important, nothing can ever be secure. A mountain-climbing vacation may wind up in deep Space. Or loyalty may prove to be high treason. But it has its rewards.
