In this book designed for AIDs patients and their caregivers, Mignon Zylstra and David Biebel give solid, practical information on what to expect on the journey through AIDs. Zylstra, who went through this process herself when her son was diagnosed with AIDs, uses her own story, and the stories of others, to answer the most frequently asked questions in a gentle yet authoritative manner.

Europe's "Black Death" contributed to the rise of nation states, mercantile economies, and even the Reformation. Will the AIDS epidemic have similar dramatic effects on the social and political landscape of the twenty-first century? This readable volume looks at the impact of AIDS since its emergence and suggests its effects in the next decade, when a million or more Americans will likely die of the disease. *The Social Impact of AIDS in the United States* addresses some of the most sensitive and controversial issues in the public debate over AIDS. This landmark book explores how AIDS has affected fundamental policies and practices in our major institutions, examining How America's major religious organizations have dealt with sometimes conflicting values: the imperative of care for the sick versus traditional views of homosexuality and drug use. Hotly debated public health measures, such as HIV antibody testing and screening, tracing of sexual contacts, and quarantine. The potential risk of HIV infection to and from health care workers. How AIDS activists have brought about major change in the way new drugs are brought to the marketplace. The impact of AIDS on community-based

organizations, from volunteers caring for individuals to the highly political ACT-UP organization. Coping with HIV infection in prisons. Two case studies shed light on HIV and the family relationship. One reports on some efforts to gain legal recognition for nonmarital relationships, and the other examines foster care programs for newborns with the HIV virus. A case study of New York City details how selected institutions interact to give what may be a picture of AIDS in the future. This clear and comprehensive presentation will be of interest to anyone concerned about AIDS and its impact on the country: health professionals, sociologists, psychologists, advocates for at-risk populations, and interested individuals.

This book presents the world-wide information about HIV/AIDS, reports and studies, and educational activities and programmes to keep the policy makers, planners, professionals, activists, researchers, educationists, teachers and students will informed of the epidemic. Contents: Teaching People with AIDS and Their Families, From HIV Infection to AIDS, Living Positively with AIDS, Women, Children and HIV, Care of the Dying, Management of Common AIDS Symptoms in the Home, Conditions that Need Special Attention in People with HIV Infection, General Information on the Use of Medicines, Pictures for Teaching, HIV/AIDS: A Pictorial Summary.

AIDS and Africa are indelibly linked in popular consciousness, but despite

widespread awareness of the epidemic, much of the story remains hidden beneath a superficial focus on condoms, sex workers, and antiretrovirals. Africa gets lost in this equation, Daniel Jordan Smith argues, transformed into a mere vehicle to explain AIDS, and in *AIDS Doesn't Show Its Face*, he offers a powerful reversal, using AIDS as a lens through which to view Africa. Drawing on twenty years of fieldwork in Nigeria, Smith tells a story of dramatic social changes, ones implicated in the same inequalities that also factor into local perceptions about AIDS—inequalities of gender, generation, and social class. Nigerians, he shows, view both social inequality and the presence of AIDS in moral terms, as kinds of ethical failure. Mixing ethnographies that describe everyday life with pointed analyses of public health interventions, he demonstrates just how powerful these paired anxieties—medical and social—are, and how the world might better alleviate them through a more sensitive understanding of their relationship.

This ethnography charts the lives of mission-educated men in Zambia and their search for meaning in the AIDS pandemic, as well as their responses to prevention and HIV testing. It also suggests how hegemonic masculinities may begin to be re-figured and gender relationships redesigned.

Robert Harlow is one of Canada's best kept literary secrets. A noted craftsman, he

is also one its finest story-tellers. Born in northern British Columbia, he was a military pilot for a number of years, later a student at the Iowa Writers Workshop, then a producer and director for a decade-and-a-half at the Canadian Broadcasting Corporation before joining the faculty of The University of British Columbia. He now lives and writes on one of the Gulf Islands off Canada's southwest coast.

In the United States, health care devices, technologies, and practices are rapidly moving into the home. The factors driving this migration include the costs of health care, the growing numbers of older adults, the increasing prevalence of chronic conditions and diseases and improved survival rates for people with those conditions and diseases, and a wide range of technological innovations. The health care that results varies considerably in its safety, effectiveness, and efficiency, as well as in its quality and cost. *Health Care Comes Home* reviews the state of current knowledge and practice about many aspects of health care in residential settings and explores the short- and long-term effects of emerging trends and technologies. By evaluating existing systems, the book identifies design problems and imbalances between technological system demands and the capabilities of users. *Health Care Comes Home* recommends critical steps to improve health care in the home. The book's recommendations cover the regulation of health care technologies, proper training and preparation for people who provide in-home care, and how existing housing can be modified and new accessible housing can be better designed for residential health care. The book also identifies knowledge

gaps in the field and how these can be addressed through research and development initiatives. *Health Care Comes Home* lays the foundation for the integration of human health factors with the design and implementation of home health care devices, technologies, and practices. The book describes ways in which the Agency for Healthcare Research and Quality (AHRQ), the U.S. Food and Drug Administration (FDA), and federal housing agencies can collaborate to improve the quality of health care at home. It is also a valuable resource for residential health care providers and caregivers.

Don Carrel has been living with AIDS since 1995. He suspects he was infected with HIV in 1981. Thirty years later, less than 2 percent of people with HIV have lived long enough to share their stories. In 1995, while lying in a hospital bed with *Pneumocystis pneumonia*, the most common form of death for someone with AIDS, Don had a riveting dream that dramatically altered his life and, perhaps the future lives of more than 100,000 teenagers. After making a full recovery, Don set out to teach young people what they needed to know about HIV prevention so that they wouldn't wind up in his shoes. His lofty goal: to stomp out AIDS. After 16 years, Don has collected thousands of thank-you letters from teens and adults who have heard his compelling presentations. Today, Don hopes to reach an even wider audience with his book, *My Dream to Trample AIDS*. Don's original goal was to put his presentation in book form, but it ended up being much more. Don says, "My story is about love, friends, family, grief, despair, hope, death and faith." It's also a

detailed primer on HIV, as expressed in the subtitle: "What everyone of any age should know about HIV/AIDS." Don devotes a chapter to the history of HIV/AIDS, including the compelling theory as to why the virus first hit the gay community in the United States before it spread into the general population. Don's book summarizes current statistics on HIV/AIDS. It warns of populations most at risk of infection today: people of color, youth and even the elderly. It instructs readers on how to be tested for HIV. In very frank language, the book describes the risks of various sexual activities and even how to use a condom "properly." Don chronicles HIV treatment and his drug regimen for the past 25 years, including the cost, side effects and possibility, or lack thereof, of a cure for HIV/AIDS. Most compelling are Don's gut-wrenching stories about how HIV/AIDS has affected him and the profound sense of loss he's experienced repeatedly with the deaths of many friends from AIDS. He explains what it feels like to have HIV/AIDS and how it has shaped all facets of his life: physically, emotionally and spiritually. He asks his closest family members and friends to share their feelings when they first learned of his diagnosis. He also includes hundreds of quotes from students who have heard him speak. Last but not least, Don explains why he believes he has survived - and thrived - thanks to a powerful directive from "the messenger." Don says, "Having HIV is a huge blessing in my life." Don writes that this experience has helped him make a dramatic shift in how he views himself and has strengthened his belief in God.
